

Adventurous Vocabulary

We are broadening our vocabulary by learning 3 new words every week.

Your child does not need to be able to read or write these words. Instead, your child will be learning to use these words in conversation.

3 Words of the Week

Nocturnal: Nocturnal animals are animals that are mainly active during the night. They hunt or feed during the night, and sleep during the day.

Diurnal: Diurnal animals are animals that are mainly active during the day. They hunt or feed during the day, and sleep during the night.

Adaption: Adaptions are changes to animals that make them better able to survive in their environment. Animals have different adaptations depending on if they are active during the day (diurnal) or active at night (nocturnal).
